

>>> database.properties

```
1 driver=oracle.jdbc.OracleDirver
2 url=jdbc:oracle:thin:@localhost:1521:orcl
3 username=scott
4 password=tiger
5 admin=\uD64D\uAE38\uB3D9
```

실행 결과

```
driver : oracle.jdbc.OracleDirver
url : jdbc:oracle:thin:@localhost:1521:orcl
username : scott
password : tiger
admin : 홍길동
```

```
public class PropertiesExample {
    public static void main(String[] args) throws Exception {
        //Properties 컬렉션 생성
        Properties properties = new Properties();

        //PropertiesExample.class와 동일한 ClassPath에 있는 database.properties
        파일 로드
        properties.load(PropertiesExample.class.getResourceAsStream
            ("database.properties"));
